## Package: directotree (via r-universe)

September 11, 2024

September 11, 2024
Type Package
Title Creates an Interactive Tree Structure of a Directory
Version 1.0.0
<b>Description</b> Represents the content of a directory as an interactive collapsible tree. Offers the possibility to assign a text (e.g., a 'Readme.txt') to each folder (represented as a clickable node), so that when the user hovers the pointer over a node, the corresponding text is displayed as a tooltip.
<b>Depends</b> R (>= 3.0.0)
License GPL (>= 3)
Encoding UTF-8
Imports collapsibleTree (>= 0.1.6), data.tree (>= 0.7.6)
LazyData true

directotree Creates an Interactive Tree Structure of a Directory

### Description

Represents the content of a directory as an interactive collapsible tree. Offers the possibility to assign a text (e.g., a 'Readme.txt') to each folder (represented as a clickable node), so that when the user hovers the pointer over a node, the corresponding text is displayed as a tooltip.

2 directotree

#### Usage

```
directotree(yourPath, showWd = FALSE, warnMe = FALSE, addReadme = FALSE,
    attributeName = '', hiddenFiles = c('Thumbs.db'), showRawTree = FALSE,
    showCollapsibleTree = TRUE, tooltip = FALSE, linkLength = 150,
    collapsed = TRUE, zoomable = TRUE, width = 1240, height = 700,
    fontSize = 15, fill = 'lightblue', nodeSize = 'leafCount')
```

#### **Arguments**

yourPath The path of the directory you want to build a interactive representation of. It

must be a string, and make sure to use / instead of \.

showWd If TRUE, R prints each directory it goes in to attach files/folders to the parent

node.

warnMe If TRUE, R prints a Warning when an empty folder is detected, and indicates its

location.

addReadme If TRUE, the content of the files whose name must be specified in attributeName,

will be attached to each corresponding folder. For instance, if in some subfolders of yourPath, some Readme.txt files describe the content of the said folders, by setting addReadme to TRUE and attributeName to 'Readme.txt', the description written in the Readme.txt files will be attached to the nodes of the corresponding

folders as a tooltip (tooltip must be set to TRUE).

attributeName If addReadme is set to TRUE, attributeName must be filled with the name

of the files whose content should be displayed as tooltips (e.i., 'Readme.txt',

'README.txt', 'info.txt', etc.).

hiddenFiles Vector of strings that must contain the names of the files that must not be dis-

played in the tree. For instance, you may want to display the content of some 'Readme.txt' files as tooltips, without them being showed as leaves of the tree.

showRawTree It TRUE, the tree structure is printed in the console.

showCollapsibleTree

If TRUE, calls the collapsible Tree function to build the interactive tree.

tooltip If TRUE, it shows the node's label and attribute value.

linkLength Length of the horizontal links that connect nodes in pixels. collapsed If TRUE, the tree's children will start collapsed by default.

zoomable Pan and zoom by dragging and scrolling.

width Width in pixels. height Height in pixels.

fontSize Font size of the label text in pixels.

fill A tree attribute containing the color for each node.

nodeSize Numeric column that will be used to determine relative node size. 'leafCount'

(cumulative count of a node's children), or 'count' (count of node's immediate

children) can also be used.
